

# MRSEC Education Directors Meeting

---

**Gil Noam, Ed.D., Ph.D. (Habil.)**  
Program in Education, Afterschool, and Resiliency

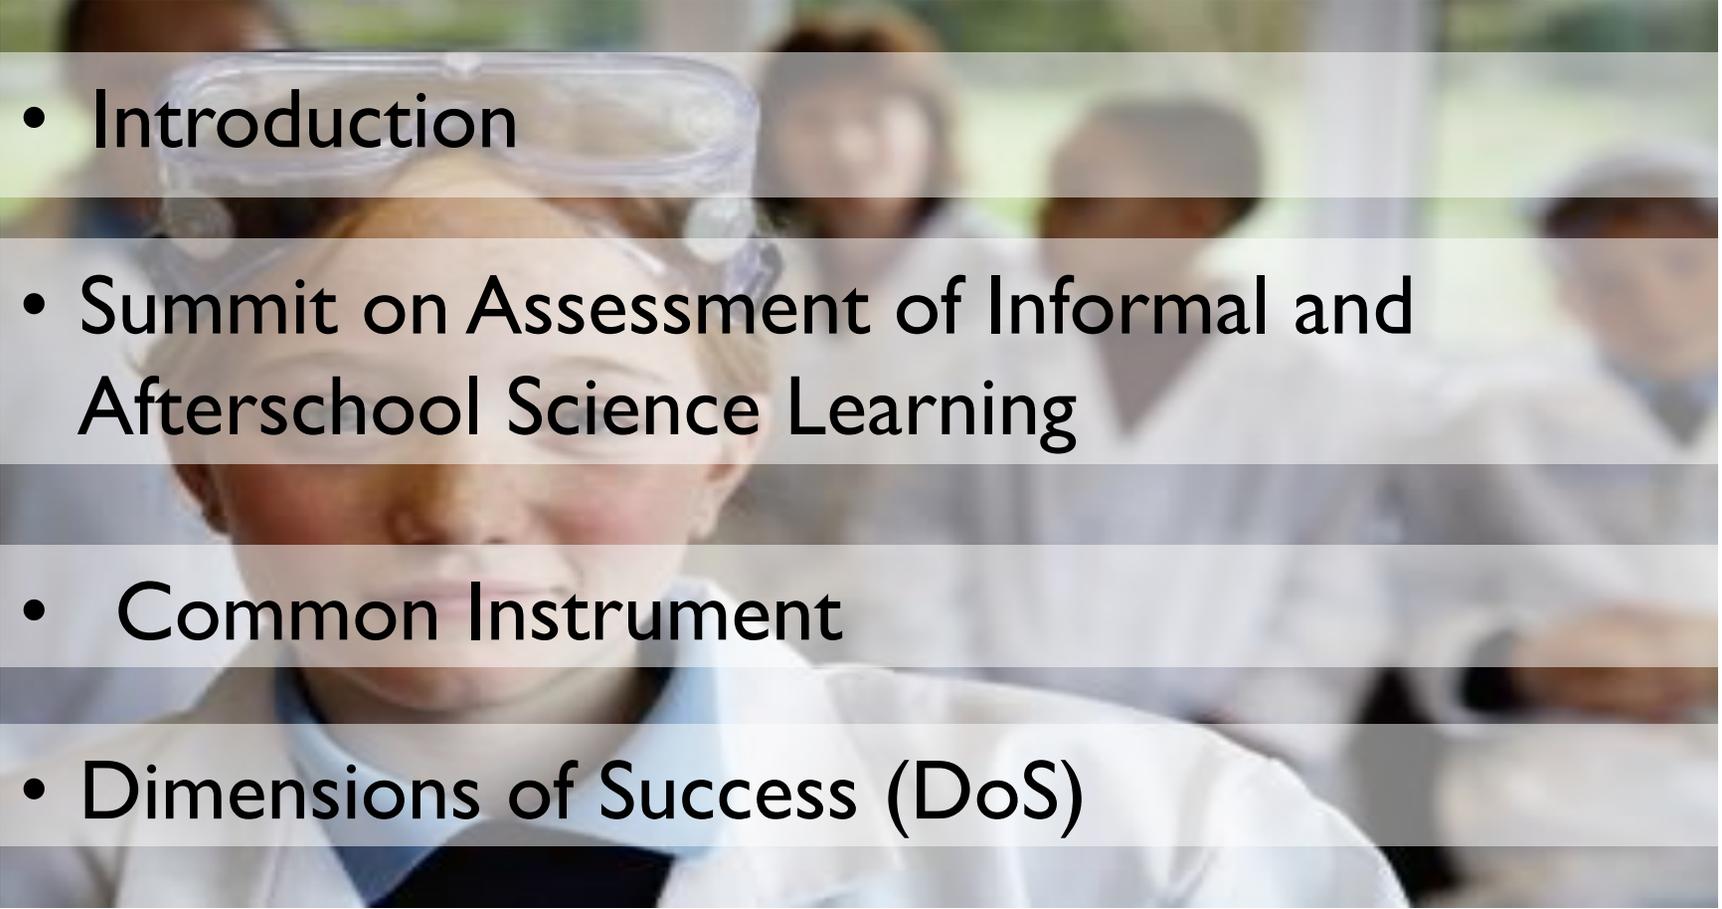

**Friday, September 28, 2012**

# Agenda

- Introduction
- Summit on Assessment of Informal and Afterchool Science Learning
- Common Instrument
- Dimensions of Success (DoS)

# Agenda

---

- 
- Introduction
  - Summit on Assessment of Informal and Afterschool Science Learning
  - Common Instrument
  - Dimensions of Success (DoS)

# What's Happening Here?

---

- Hands-on exploration
- Students engaging in principles of inquiry by asking questions about the animal, making observations, providing evidence for its behavior
- Students deciding what style of presentation they want to give (voice/choice)
- Didactic is not quite working

How do we measure the learning and STEM program quality? How do we assess outcomes and which ones?

---

# Agenda

- Dimensions of Success (DoS)

# Summit on Assessment of Informal and Afterschool Science Learning

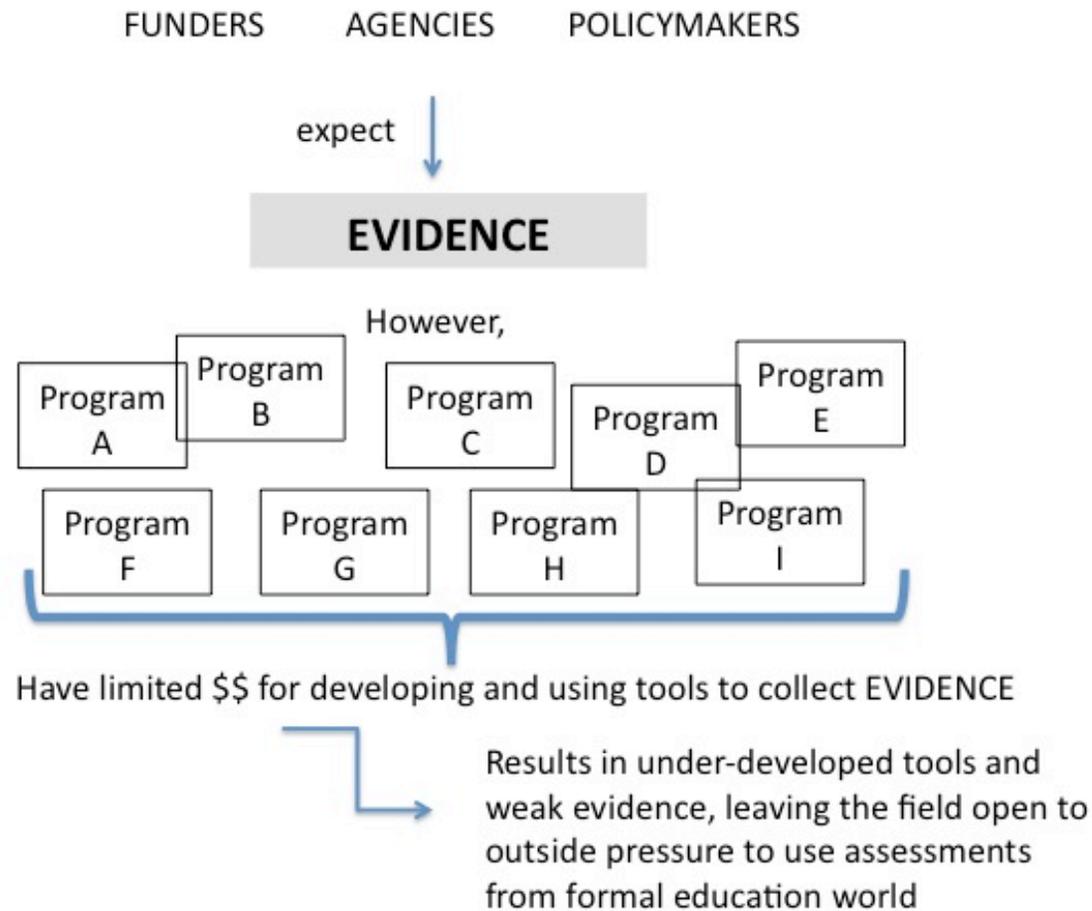

June 10-12, 2012

---

Experts in measurement and assessment, informal and formal science, along with those who focus on content development, student engagement and motivation, and learning theories.

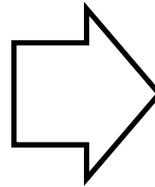

- NRC
- PEAR at Harvard
- Noyce, Moore, Bechtel, Samueli Foundations
- Report will be released this fall

# Current Climate of Assessment for Afterschool Science

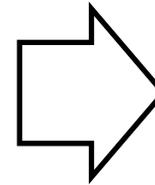

# Starting Points...to build evidence and a Center

Afterschool is more than homework help and extra-curricular activities--it is an opportunity to access science content/practices in a way different from school...

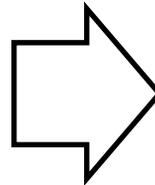

School assessments are inappropriate; afterschool field needs assessments that do not take away from the informal, youth-oriented feel of afterschool

Common Core and Next Generation Standards push for integrated learning and content/practices learned together

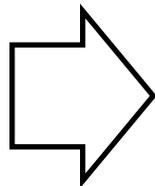

Afterschool assessments can help lead the way in designing assessment tasks and items that integrate science with other subjects, are hands-on, and performance-oriented

Partnership and collaborations among afterschool sites and other community resources; more funding opportunities for larger networks

Assessments need to be able to be used across sites, even if they have unique program structure allowing for aggregation of data and building of evidence-base

There is a push for afterschool science programming to be more outcomes-driven

Afterschool assessments should focus on key outcomes that are most salient for science learning in afterschool. If we don't choose outcomes, they will be defined for us.

## The Common Instrument

Dear Student,  
Thank you very much for answering the questions below. This survey is voluntary, you do not have to fill this out, and you can stop it at any time without causing any problems for you. This survey will help researchers learn more about the attitude of youth towards Science, Technology, Engineering and Math.

*Please print as clearly as possible.*

First Name: \_\_\_\_\_ Middle Initial: \_\_\_\_\_ Last Name: \_\_\_\_\_

**Birthdate:**

What *month* were you born? (Choose one)

- January   
  February   
  March   
  April   
  May   
  June  
 July   
  August   
  September   
  October   
  November   
  December

What *day* were you born? \_\_\_\_\_ What *year* were you born? \_\_\_\_\_

This is not a test and you will not be graded for answering these questions. There are no right or wrong answers. Simply indicate how much you DISAGREE or AGREE with the following statements. Choose only one answer on each line.

	Strongly Disagree	Disagree	Agree	Strongly Agree
1. Science is something I get excited about.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. I like to take things apart to learn more about them.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. I like to participate in science projects.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. I'd like to get a science kit as a gift (for example, a microscope, magnifying glass, a robot, etc).	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. I like to see how things are made (for example, ice-cream, a TV, an iphone, energy, etc).	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. I like to watch programs on TV about nature and discoveries.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. I am curious to learn more about science, computers or technology.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

# Boston STEM Data and Other Projects

---

## 2010 study

- 1200 students
- Cronbach alpha= .92
- Dosage

## Boston Summer STEM project

- 454 surveys administered
- Cronbach alpha= .92
- Boys increased most

## 12 Dimensions of Success

## Organization Dimension

---

- Materials are prepared
- Transitions are smooth
- Time used effectively
- Flexibility **if** need arises

# The DoS Tool

## 1. ORGANIZATION

*Description:* This rubric assesses the degree to which the facilitator delivers the observed and preparation. Evidence of organization includes having the necessary materials ready in sequence, being ready to accommodate to changing situations, and having smooth transitions in the learning environment.

### 1. ORGANIZATION

*Description:* This rubric assesses the degree to which the observed and preparation. Evidence of organization includes having the necessary materials ready in sequence, being ready to accommodate to changing situations, and having smooth transitions in the learning environment.

*Elaboration:* Learning is promoted in an environment where the facilitator has the necessary materials at hand during the activity, not have to retrieve them during the activities, resulting in time in transitions, dead time or chaos in the learning environment. If the facilitator is not flexible to respond to changing situations, an outdoor activity was planned, the facilitator should be prepared to respond to changing situations.

The time aspect of this dimension reflects, at a general level, whether or not there was enough time to do particular parts of activities. This differs from the use of time in the Purposeful Activities rubric (see p.12), which focuses on whether or not time is used well during activities to guide students towards learning goals.

*Commentary:* this rubric does not require observers to make inferences about the quality of materials or the activities, only about the organization of the activities. Observers should consider the flexibility of a facilitator only if they observe a situation where a back-up plan is required. If there is no clear need for adjustment, then the observer does not need to consider this aspect of the dimension when deciding on a level in the rubric.

#### Summary:

- All necessary materials available
- Transitions are smooth
- Time used effectively
- Flexibility if need arise

<p>aspects of the activity. The facilitator does not allocate time appropriately, significantly disrupting students' learning opportunities (e.g. rushing to the end of or dragging out an activity).</p> <p>The facilitator is not prepared to adapt to changing situations that arise.</p>	<p>This tool time disrupts and weakens the enactment of the activity. The facilitator unevenly allocates the time necessary for some portion of the activities, resulting in some disruption of students' learning opportunities.</p> <p>The facilitator is somewhat prepared to respond to changing situations he/she faces (e.g., has extra activities ready, but not necessarily set-up).</p>	<p>materials. The facilitator allocates a reasonable amount of time for each part of the activity, although there may be minor instances where he/she slightly miscalculates the time necessary to maximize students' learning opportunities.</p> <p>The facilitator is prepared to respond with a back-up plan when needed, but the transition to it is not entirely smooth.</p>	<p>The facilitator allocates enough time to allow all the parts of the activity to run smoothly, thus maximizing students' learning opportunities.</p> <p>The facilitator has prepared carefully and can flexibly adapt to changing situations by smoothly shifting plans in order to still successfully enact activities.</p>

# The DoS Tool

## I. ORGANIZATION

**Description:** This rubric assesses the degree to which the facilitator is organized and prepared. Evidence of organization includes having the necessary materials, being ready to accommodate to changing situations, and learning environment.

**Elaboration:** Learning is promoted in an environment where the facilitator has the necessary materials at hand during the lesson, not have to retrieve them during the activities, resulting in a loss of time in transitions, dead time or chaos in the learning environment ahead of time so he/she can be flexible to respond to changing situations. If an outdoor activity was planned, the facilitator should be able to adapt.

The time aspect of this dimension reflects, at a general level, whether the facilitator uses the use of time in the Purposeful Activities rubric (see activities to guide students towards learning goals).

**Commentary:** this rubric does not require observation to make informed organization of the activities. Observers should consider the flexibility required. If there is no clear need for adjustment, then the observer is deciding on a level in the rubric.

### Summary:

- All necessary materials available
- Transitions are smooth
- Time used effectively
- Flexibility if need arises

## Organization Rubric

### EVIDENCE ABSENT

**There is little or no evidence that the facilitator delivers the activities in an organized manner.**

1

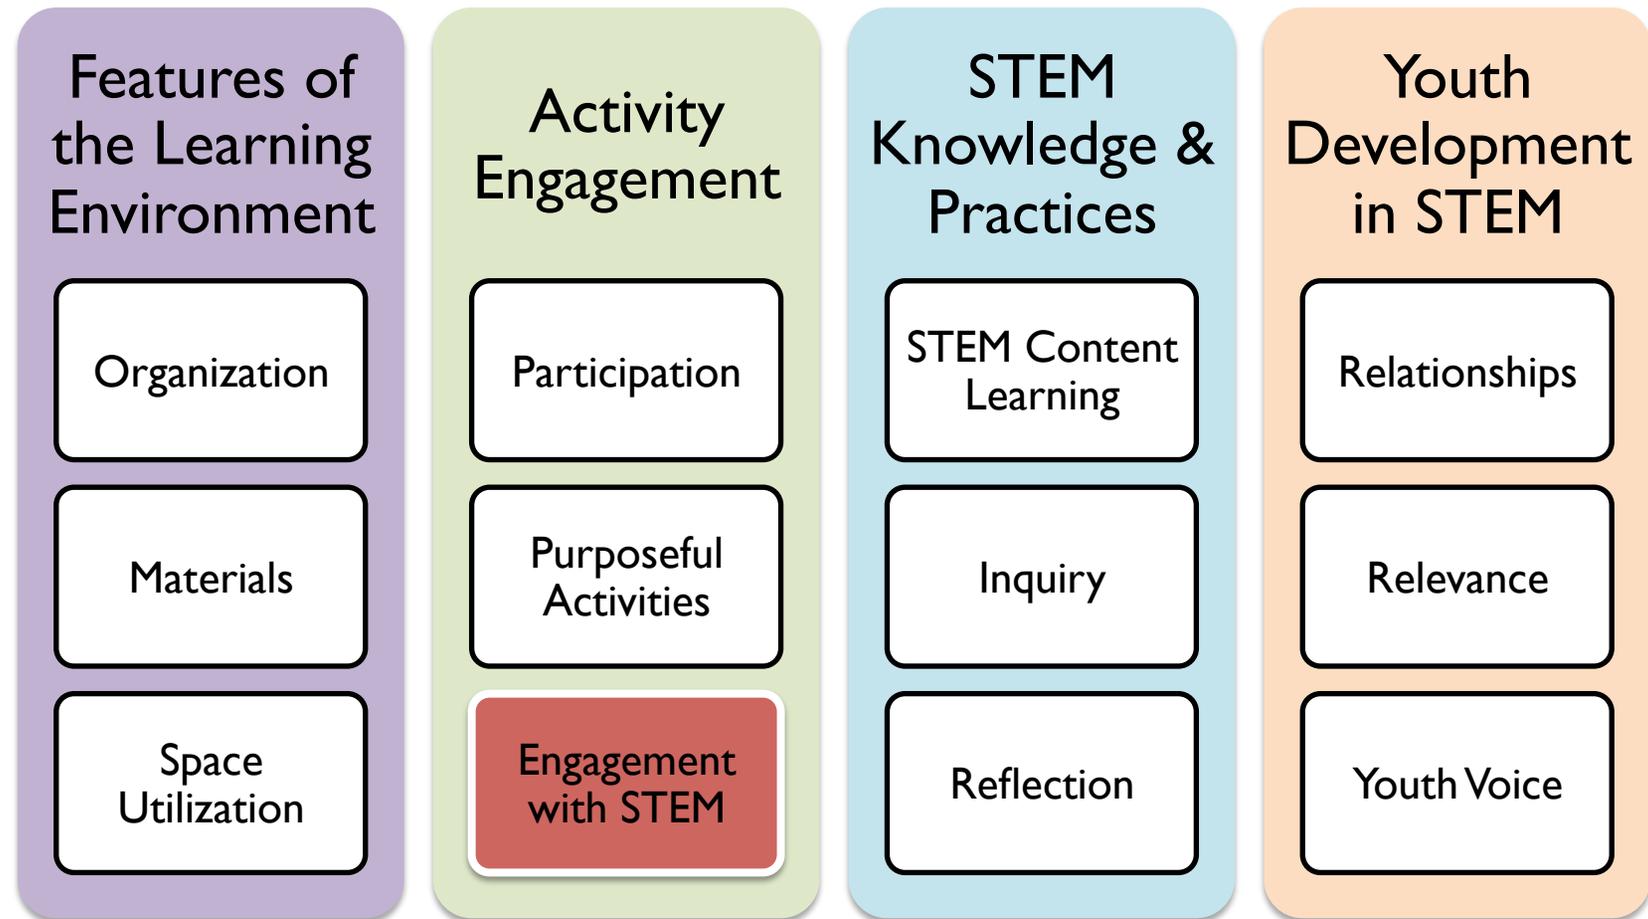

**The facilitator often has to stop the activity in order to gather or prepare materials or to organize aspects of the activity. The facilitator does not allocate time appropriately, significantly disrupting students' learning opportunities (e.g. rushing to the end of or dragging out an activity).**

**The facilitator is not prepared to adapt to changing situations that arise.**

## Organization Rubric

EVIDENCE ABSENT	INCONSISTENT EVIDENCE	REASONABLE EVIDENCE	COMPELLING EVIDENCE
There is little or no evidence that the facilitator delivers the activities in an organized manner.	There is weak evidence that the facilitator delivers the activities in an organized manner.	There is clear evidence that the facilitator delivers the activities in an organized manner.	There is consistent and meaningful evidence that the facilitator delivers the activities in an organized manner.
1	2	3	4
The facilitator often has to stop the activity in order to gather or prepare materials or to organize aspects of the activity. The facilitator does not allocate time appropriately, significantly disrupting students' learning opportunities (e.g. rushing to the end of or dragging out an activity).	Some of materials are at hand, but with some loss of time for gathering or preparing materials. This lost time disrupts and weakens the enactment of the activity. The facilitator unevenly allocates the time necessary for some portion of the activities, resulting in some disruption of students' learning opportunities.	The majority of materials are at hand with minimal loss of time for gathering or preparing materials. The facilitator allocates a reasonable amount of time for each part of the activity, although there may be minor instances where he/she slightly miscalculates the time necessary to maximize students' learning opportunities.	All of materials are at hand and the activities are organized in a way that minimizes time loss. The facilitator allocates enough time to allow all the parts of the activity to run smoothly, thus maximizing students' learning opportunities.
The facilitator is not prepared to adapt to changing situations that arise.	The facilitator is somewhat prepared to respond to changing situations he/she faces (e.g., has extra activities ready, but not necessarily set-up).	The facilitator is prepared to respond with a back-up plan when needed, but the transition to it is not entirely smooth.	The facilitator has prepared carefully and can flexibly adapt to changing situations by smoothly shifting plans in order to still successfully enact activities.

## 12 Dimensions of Success

## Engagement with STEM Dimension

---

- Opportunities to participate in hands-on activities
- Active cognitive engagement in learning
- Hands-on activities should help students explore and think about STEM content
- Activities are not “hands on, minds off”

# Engagement with STEM Rubric

<p><b>There is minimal evidence that the students are engaged with hands-on or interesting activities where they can explore STEM content.</b></p>	<p><b>There is weak evidence that the students are engaged with hands-on or interesting activities where they can explore STEM content.</b></p>	<p><b>There is clear evidence that the students are engaged with hands-on or interesting activities where they can explore STEM content.</b></p>	<p><b>There is consistent and meaningful evidence that students are engaged with hands-on or interesting activities where they can explore STEM content.</b></p>
<p><b>1</b></p>	<p><b>2</b></p>	<p><b>3</b></p>	<p><b>4</b></p>
<p>The activities mostly leave students <b>in a passive role, where they are observing a demonstration or listening</b> to the Activity Leader talk. (minimal hands-on opportunities)</p>	<p>Students engage in hands-on activities; however, there is limited evidence that the hands-on activities encourage students to engage with STEM content in meaningful ways. (<b>“hands-on, minds-off”</b>)</p>	<p>There are some opportunities for students to engage in hands-on activities that allow them to actively explore STEM content. <b>Some parts of the activities still leave students as passive observers while the Activity Leader does all the cognitive work.</b></p>	<p>There are consistent opportunities for students to actively explore STEM content by engaging in hands-on activities, <b>where students do the cognitive work themselves</b> and the Activity Leader maintains the role as Activity Leader versus teller.</p>

## Let's Try It!
